Carrick-Flow coordinates all the processing a media platform has to get done so it finishes as quickly as possible, pooling together similar resources, ensuring a prioritized execution of the most urgent tasks, always avoiding infrastructure saturation and taking advantage of possible cloud opportunities...

Connect and Automate

Connect all the tools and softwares you need in advanced workflows to automate your media processing.

Carrick-Flow is independent from MAM and other media manipulation tools: feel free to use the right tool for the right purpose.

Virtual Farms

Gather heterogeneous resources within virtual farms to mix tools from various manufacturers and versions. Mutualize and win productivity.

Instantly empower your processing capability with temporary or cloud resources without changing your workflows !

Cloud, on-premises and hybrid

Integrate cloud components into your processes, on the run, without changing your workflows. Mix both SaaS solutions and dedicated cloud virtual machines to improve efficiency.

Hybrid installation (cloud and on-prem'), 100% cloud or 100% local, you choose!

Flexibles plans : SaaS or Buy

Choose the plan that fits best to your use case. Plans include SaaS and Licensing possibilities. They also allow you to easily test the solution before investing time and money.

Connectors for market tools are free. Turnkey workflows are supplied at fixed price.

STARTER

ENTERPRISE

LICENSING

Scale, focus on priorities

No longer worry about peak loads: provide your infrastructure with a SPOF-free orchestration that will detect them and spread the workload across resources on the spot focusing resources towards top priorities.

Storage management

Benefit from a unified repository of your content across your multiple enterprise storage, both local and cloud : Keep storage rules and lifecycles policies out of your business workflows

Interfaces

Our microservice architecture allows us to craft and add any API interface in our platforms. Connectors for usual softwares and tools are readily available but should you need them, we can easily integrate any home made or specific tool as well ! Lately we've released connectors with Limecraft, Faspex, Aspera ES, Box, Diva, ADA, VidChecker, Airtable, Phraseanet and many others...

Customer quote

"Carrick-flow is a next-generation workflow engine, flexible, robust and easily integrable into an IT ecosystem. It centralizes all of our business workflows at Eclair in a cloud solution that manages and optimizes workflows, for greater efficiency."

Arnaud Drillon – VP Global projects

Features

- Virtual farms gathering heterogeneous equipment
- Load analysis with forecast and detection of peak activity
- Delegation on remote infrastructure with dynamic instantiation of tasks
- Intelligent and flexible multistorage management
- Real-time control of tasks parallelization
- Customizable engine for continuous tasks prioritization
- Functional tags fully customizable on tasks and workflows
- Simplified error management and recovery
- High resilience with strong redundancy
- Control on-prem' and cloud workflows from any cloud platform
